

7. DIAGNOSTICS ANALYSIS Digs deep to understand the root cause and analyse data-point of certain outcome. i.e. When a coffeeshop recognises a sudden drop of customer visitation, they will check what is the root cause.

8. PREDICTIVE ANALYSIS Has to do with the probability of it happening again, what are the chances (Predicts the future outcome). i.e. Coffee can make a decision as to how much sale they think they'll make in the future.

9. PRESCRIPTIVE ANALYSIS: Determine the outcome/plan of action by examining past & present outcomes. i.e. Company may plan sell a product, firstly will examine the past and the present outcomes.

10. DATA LITERACY Refers to the ability of reading (raw) understanding, creating and communicating data as information i.e. When employees are in the organisation are able to understand data (Data Literate), that can help the organisation to make informed decision.

11. Structured data: Organised data stored in rows and columns. i.e. information about client well captured & stored in data sets.

12. UNSTRUCTURED DATA Unorganised, uncleaned data, difficult to read & store i.e. social media posts.

13. DATA WAREHOUSE: Where data is stored (dataset) i.e. Multiple databases stored in the same dataware house.
